

Thermal reconnaissance terminal

The terminal is an access controller with a temperature detection function.

It incorporates Plug-Play support (quick deployment, installation and simplified configuration).

It can take the temperature quickly.

It has a wide range of applications, such as businesses, hotels, factories, schools, shops, train stations...

Equipment :

- Support deployable quickly. Quick installation and setup.
- Uncooled vanadium oxide sensor for temperature measurement.
- Temperatures measured from 30 to 45 degrees Celsius with a margin of 0.5
- Scan distance 0.3m to 2m
- How the temperature is measured quickly. Detection of heads and bodies without any collection of identity data.
- View measured temperatures on an authentication page
- Rapid vocal triggering when fever and detected.
- It is possible to configure the opening of the doors according to the results.
- Online and offline transmission of real-time temperature information to customer software via data backup and communication software.
- Adjustable brightness.
- 50,000 faces have a recording capacity.
- Recognition under '0.2s successful result ' 99% of the time
- Customising the customer's image media
